

Talc USP by Behansar

The graphic features the Behansar logo at the top left, consisting of a stylized flame icon and the word "BEHANSAR". Below this, the text "Talc USP" is prominently displayed in large, bold, blue and grey letters. To the right of the text is a circular inset showing a white bag of Behansar Talc USP with blue vertical stripes. The bag has a label with the following information: "Talc, USP", "Batch No.: 0503010-128", "Mfg. Date: 2026, May", "Retest Date: 2028, May", "Net Weight: 25.0 Kg", and "Preserve in well-closed containers. No storage requirements specified". Below the bag, the website "www.behansar.com" is visible. To the left of the bag, three circular icons with corresponding text describe the product's benefits: a green gear icon for "Excellent lubricating, glidant, anti-caking, and diluent properties", an orange cylinder icon for "Improves powder flow, reduces friction during tablet compression", and a blue gear icon for "Enhances manufacturing efficiency". At the bottom, three white boxes with icons and text highlight key features: a blue shield icon for "High Purity & Quality" (Manufactured in compliance with pharmacopeial standards), a green flask icon for "Strict Quality Systems" (Supplied under strict quality systems), and an orange checkmark icon for "Reliable Performance You Can Trust" (For pharmaceutical and nutraceutical applications). The Behansar logo and website "behansar.com" are at the bottom center.

BEHANSAR

Talc USP

Talc USP is a pharmaceutical-grade hydrated magnesium silicate widely used as a **multifunctional excipient** in both solid and topical dosage forms.

- Excellent lubricating, glidant, anti-caking, and diluent properties
- Improves powder flow, reduces friction during tablet compression
- Enhances manufacturing efficiency

High Purity & Quality
Manufactured in compliance with pharmacopeial standards

Strict Quality Systems
Supplied under strict quality systems

Reliable Performance You Can Trust
For pharmaceutical and nutraceutical applications

behansar.com

Talc USP is a pharmaceutical-grade hydrated magnesium silicate widely used as a multifunctional excipient in both solid and topical dosage forms. Its excellent **lubricating, glidant, anti-caking, and diluent** properties help improve powder flow, reduce friction during tablet compression, and enhance manufacturing efficiency. Talc is widely used in pharmaceutical coating formulations, and the talc to polymer ratio plays an important role in controlling the drug release rate from coated beads and tablets. Manufactured in compliance with pharmacopeial standards, Behansar's Talc USP is supplied under strict quality systems to ensure high purity, consistent quality, and reliable performance for pharmaceutical, nutraceutical and cosmetic applications.

Appearance

Stability & Storage

Should be stored in tightly closed containers.

Applications

Pharmaceutical Grade Talc is extensively used as a multifunctional excipient in solid dosage forms and topical pharmaceutical products.

High-purity Talc is also widely used in cosmetic and personal care formulations because of its exceptional softness, moisture-absorbing capacity, smooth texture, and excellent skin feel.

Advantages of Behansar Talc
